

**Work Orders #1201013, 1201015, 1202001, 1202003, 1202004, 1202005**  
Dimock Residential Groundwater Site

Due to a delayed request from the client, all samples from all Work Orders listed above, were reanalyzed for lithium after the original data had been submitted. The request was to report results as close to a trigger of 32 ug/L as possible, as opposed to the 200ug/L quantitation limit we were currently providing. The lab was able to accommodate with a 25ug/L quantitation limit. All resulting data is included in this Case File. All associated paperwork, such as, the COCs, requests, memos, and review forms will be found in each individual Case File.
